Ernesto Gama Jimenez

Senior Full-Stack Developer

Pereira, Risaralda, Colombia | +57 323 462 1392 | ernesto.gama.jimenez@gmail.com

Summary

Seasoned full-stack web developer with over 10 years of experience specializing in both React and Angular for dynamic, mobile-friendly frontend development, and Python for robust backend solutions. Extensive background in building scalable, reliable, and maintainable systems, with a strong emphasis on Python frameworks, including Django and Flask, to create AI-driven features and optimize complex queries. Adept at designing and implementing efficient backend architectures to ensure high performance, reliability, and scalability. Skilled in frontend technologies (React, Angular) to build seamless and interactive user interfaces. Proficient in following Agile methodologies and best coding practices. Experienced in troubleshooting and optimizing both frontend and backend systems, and collaborating with cross-functional teams to deliver projects that enhance user experience and operational efficiency. Strong leadership abilities, capable of leading teams, performing thorough code reviews, and mentoring junior developers.

Professional Experience

Rootstack | **Senior Software Engineer** **09.2023 – 06.2025**

- Worked closely with cross-functional teams in an Agile environment, actively participating in all phases of the software development life cycle using Scrum methodology.
- Led the redesign of a client-facing portal using React, Angular, and Next.js with TypeScript, significantly enhancing the user interface and improving customer satisfaction by 35%.
- Designed and developed scalable backend systems with Python, leveraging frameworks like Django and Flask, and implemented optimized database queries, resulting in a 30% improvement in data query performance.
- Collaborated with data science teams to implement AI-driven features, such as a chatbot, using Python-based models and integrating them into serverless architectures for enhanced customer experience.
- Streamlined the development pipeline by establishing CI/CD workflows, reducing release-related issues and accelerating feature deployment timelines.
- Partnered with UI/UX designers and stakeholders to deliver responsive, modular front-end applications using React, Angular, and cloud infrastructure.
- Optimized application performance through architectural improvements in both the frontend (React, Angular) and backend (Python), contributing to a 30% reduction in user navigability issues.
- Played an active role in mentoring junior developers, conducting code reviews, and promoting best practices in both Python backend development and modern JavaScript frameworks.
- Provided support in managing IT operations and ticketing systems, improving internal response times and service efficiency by 10%.

Tech Stack:
React, Angular, Next.js (with TypeScript), Python (Django, Flask), PostgreSQL, MySQL, MongoDB, AWS, GCP, Git, GitHub, GitLab, Jenkins, CircleCI, Docker, Kubernetes, RESTful APIs, GraphQL

Teleperformance | Senior Web Engineer **10.2021 – 08.2023**

- Led front-end optimization efforts by using React and Next.js, applying responsive design principles that improved mobile user retention by 40% and boosted overall user engagement by 30%.
- Designed and deployed a high-performance microservices architecture using Python (Django, Flask) in a test-driven development (TDD) environment, enabling the platform to handle over 100,000 concurrent users while cutting deployment times and server resource consumption in half.
- Drove the migration to a cloud-native infrastructure using a major cloud provider (AWS, GCP), introducing AI-powered analytics features in Python that increased predictive accuracy by 35% and significantly enhanced system scalability.
- Engineered RESTful APIs using Python (Django, Flask) to improve backend performance, reducing server response time by 40%, and integrated key third-party services to expand core platform capabilities and improve user experience.
- Built a real-time communication system with reduced latency and added intelligent summarization features, utilizing Python for backend logic and WebSockets for real-time updates, elevating the effectiveness of real-time interactions within the platform.
- Improved database efficiency through advanced query optimization and indexing strategies in Python-based ORM (Django ORM, SQLAlchemy), achieving a 15% performance gain and reducing server load by 40%.
- Developed interactive data dashboards with React and Python-based backend, delivering actionable insights that helped stakeholders make faster and more informed decisions.
- Streamlined application deployment and scalability by containerizing services with Docker and orchestrating infrastructure with Kubernetes, resulting in better resource utilization and simplified system maintenance.

Tech Stack:

React, Angular, Next.js (with TypeScript), Python (Django, Flask), PostgreSQL, MySQL, MongoDB, AWS, GCP, Git, GitHub, GitLab, Jenkins, CircleCI, Docker, Kubernetes, RESTful APIs, GraphQL, WebSockets, Celery (for task queues), Redis (for caching)

Tech Mahindra | Senior Web Engineer **11.2019 – 10.2021**

- Integrated third-party APIs including payment and accounting systems, ensuring seamless communication with external services via Python-based APIs and optimizing backend interactions.
- Designed dynamic, multi-browser compatible pages based on a micro-frontend architecture using React.js/Next.js and Tailwind CSS with TypeScript, improving scalability and maintainability.
- Utilized Python (FastAPI, Django) on the backend to implement a microservices architecture, ensuring robust inter-service communication with AWS SQS and constructing APIs for efficient data exchange between front-end and back-end systems.
- Implemented real-time notifications using AWS SNS and Lambda, leveraging Python for backend event-driven logic to enhance interactivity and responsiveness of the applications.
- Contributed to database design and optimization by leveraging AWS RDS (PostgreSQL) and Python-based ORM (Django ORM), ensuring data integrity, scalability, and fast retrieval.
- Actively participated in Agile development methodologies, using Python for backend features and React/Angular for frontend, consistently meeting project deadlines and delivering high-quality software solutions.

Tech Stack:

React, Angular, Next(TS), Python(Django, FastAPI), PostgreSQL, MongoDB, AWS, Redis, RESTful API, GraphQL

Vydr.io | **Web Engineer** **11.2016 – 10.2021**

- Took part in the development of a high-performing single-page application (SPA) for the financial sector using React.js, Shopify, WordPress, and Laravel, contributing to a 30% increase in user interaction and performance.
- Optimized website load time by 35% using frontend optimization techniques such as code minification, image optimization, CSS sprites, and SEO improvements, driving the site to the top 5 Google search results.
- Formulated and applied rigorous testing protocols using Jest and Cypress, reducing post-launch bug reports by 75%, ensuring high-quality releases, and implemented CI/CD pipelines with Git for streamlined development.
- Optimized database queries and interactions with MySQL, implementing indexing and query optimizations that reduced database load by 40% and contributed to a 15% improvement in data retrieval performance.
- Delivered responsive, user-friendly web applications on platforms like Shopify and WordPress, leveraging AMP (Accelerated Mobile Pages) to boost mobile traffic by 25%, and implemented local and session storage for enhanced user experiences.
- Utilized Python (Django, Flask) for building backend services, contributing to efficient data handling and scalability, and integrated APIs to link frontend services with database systems.
- Participated in cross-functional team efforts to integrate Python-based microservices with frontend technologies like React, improving application performance and user interactivity.

Tech Stack:
React, Angular, Next.js (with TypeScript), Tailwind CSS, Python (Django, Flask), Laravel, Shopify, WordPress, MySQL, PostgreSQL (AWS RDS), MongoDB, AWS, GCP, RESTful APIs, GraphQL, WebSockets, Redis, Docker, Kubernetes

Education

Bachelor of Science in Computer Science **September 2014**

Universidad de las Américas Puebla

Key Skills

- **Frontend**
  React, Angular, Next.js (with TypeScript), Tailwind CSS, Shopify, WordPress, AMP, HTML/CSS/JS, Jest, Cypress
- **Backend**
  Python (Django, Flask, FastAPI), Laravel, Redis, Node.js, AWS Lambda, AWS SNS, AWS SQS, GraphQL
- **Databases**
  MySQL, PostgreSQL (AWS RDS), MongoDB, SQLAlchemy(Implied with Python-based ORM, Django ORM)
- **Cloud**
  AWS RDS, AWS Lambda, GCP, Docker, Kubernetes, CI/CD, Git
- **Performance Optimization & Testing**
  Code Minification, Image Optimization, CSS Sprites, SEO Optimization, TDD
