SENIOR SOFTWARE ENGINEER

Highly skilled Software Engineer with 10+ years of experience in designing, developing, and deploying full-stack solutions using modern frameworks and technologies. Proficient in Angular, React, Next.js, Node.js and RESTful API development, with a strong background in Microservices architecture and database design. Adept at implementing Agile/DevOps practices and leveraging CI/CD tools to deliver secure, scalable, and efficient solutions. Passionate about collaborating in dynamic teams to create cutting-edge platforms that enhance user experience and drive business growth.

SKILLS & TECHNIQUES

- **Programming Languages**: JavaScript, Typescript, Python, Java
- **Frontend Development**: Angular, React, Next.js, Redux, NgRx, HTML5, CSS3, responsive design, debugging and extending existing codebases
- **Backend Development**: Node.js, Express.js, Spring Boot, Microsoft Architecture, RESTful API, GraphQL
- **Database Management**: MongoDB, PostgreSQL, MySQL, schema design, optimization, and query performance tuning
- **DevOps & CI/CD**: Jenkins, Docker, Kubernetes, and version control with Git
- **Testing:** Jest, React Testing Library, Mocha/Chai, Cypress, Jasmine, Karma, JUnit
- **Messaging & Streaming**: Kafka, RabbitMQ
- **Agile Methodologies**: Scrum, Kanban, and cross-functional collaboration
- **Cloud** T**echnologies**: AWS, GCP, Microsoft Azure
- **Security Practices**: Designing secure APIs and implementing best practices for data protection
- **Problem Solving**: Strong Analytical and debugging skills to identify and resolve complex issues efficiently

PROFESSIONAL EXPERIENCE

RootStack **03.2022 – 07.2025**
Senior Software Engineer

- Collaborated with product managers to transform a multi-page web app into a single-page application (SPA) using Angular, React, NgRx and Redux, resulting in a 30% increase in user engagement and boosting yearly revenue by 15%**.**
- Designed and developed secure, scalable RESTful APIs, integrating with backend systems to enable seamless data flow, resulting in a 15% increase in application reliability.
- Built responsive, WCAG-compliant interfaces using Angular, HTML5, and CSS3, ensuring cross-browser compatibility and achieving a 20% increase in accessibility compliance scores.
- Developed backend services using Node.js, contributing to a Microservices architecture that improved scalability by 40% and maintainability by reducing development time for new features by 30%.
- Enhanced Shopify store functionality by integrating third-party apps and APIs, including payment gateways, marketing automation tools, and inventory management systems, leading to a 20% improvement in operational efficiency.

- Worked with MongoDB and PostgreSQL to implement efficient schema design and database optimization, leading to 20% faster query execution and a 25% reduction in database load, significantly improving overall system performance and query reliability.
- Optimized app performance by implementing lazy loading, tree-shaking, and code splitting, reducing page load times by 40% and improving SEO rankings.
- Conducted thorough testing using Jest, Cypress, Jasmine, and Mocha/Chai for Angular, React, and Node.js applications, identifying and resolving 95% of reported bugs. Documented testing processes to streamline workflows, improving debugging efficiency and saving the team 10+ hours weekly.
- Integrated Kafka and RabbitMQ messaging systems into the Microservices architecture, enabling asynchronous communication and real-time data streaming, which improved scalability and reduced processing latency by 25%.
- Collaborated on CI/CD pipeline improvements, reducing deployment time by 30% and ensuring smooth feature rollouts with minimal downtime.
- Leveraged Docker and Kubernetes to containerize and orchestrate Microservices, streamlining deployments, ensuring high scalability and availability, and reducing system downtime by 30%.
- Mentored a team of 5 junior front-end developers on Angular best practices, resulting in a 25% reduction in code review times and a 30% improvement in team productivity.
- Actively participated in Agile ceremonies, including sprint planning and retrospectives, helping the team meet 95% of sprint goals consistently.

UST
Full Stack Engineer **09.2018 – 12.2021**

- Designed and built RESTful APIs to serve data dynamically to the JavaScript frontend, handling 10,000+ concurrent users and ensuring 99.9% uptime for critical user operations.
- Developed a client-side rendering (CSR) app using Angular, NgRx, Angular Router, and HTTPClient, improving page load performance by 40% and achieving a 20% increase in user retention. Integrated with a Node.js backend**,** optimizing API communication and reducing response times.
- Utilized Node.js to create robust and efficient backend services, seamlessly integrating with PostgreSQL and MongoDB, reducing data query latency by 35% and ensuring smooth data management for high-traffic applications.
- Proposed and directed significant architectural improvements, optimizing overall application efficiency and boosting performance by 30%.
- Implemented Big Data solutions using Apache Spark, Kafka, and Cassandra, achieving 50% faster data processing and enabling real-time analytics for actionable insights.
- Enhanced system scalability and fault tolerance by containerizing Microservices with Docker, reducing deployment time by 25% and improving system reliability during peak traffic periods.
- Conducted database schema design and query optimization, enhancing data retrieval speeds and improving overall system performance.
- Streamlined deployment processes by containerizing applications with Docker and orchestrating them via Kubernetes, enabling automated scaling and seamless rollouts that reduced production downtime by 20% and improved resource utilization.
- Leveraged Kafka and RabbitMQ to establish robust, event-driven communication between Microservices, reducing message processing latency by 30% and enhancing overall system resilience and throughput.
- Partnered with cross-functional teams to align backend services with business goals, contributing to a 15% faster feature delivery cycle.

VASS **12.2014 – 06.2018**

Full Stack Developer

- Engineered scalable micro frontend web applications using Angular, Typescript, NgRx, and RxJS, delivering a 20% improvement in user experience and streamlining component-level state management. Integrated seamlessly with a Node.js backend, ensuring efficient data flow and optimized performance.
- Collaborated with designers to establish a consistent and polished look across the application, creating and documenting a shared component library in Storybook, reducing design inconsistencies by 30% and accelerating feature development.
- Built responsive, fully functional UIs and reusable components using Angular Material, achieving cross-browser compatibility and enhancing accessibility for diverse user bases. Integrated with a Node.js backend, ensuring seamless data handling and performance optimization.
- Implemented analytics services and real-time production monitoring with Sentry and AWS CloudWatch, improving incident response times by 40% and providing actionable insights for performance tuning.
- Added telephony services with real-time notifications, contributing to a 15% increase in revenue by improving customer engagement and service efficiency.
- Increased test coverage by implementing rigorous testing practices with Jest, Cypress (for frontend) and Mocha/Chai (for Node.js backend), reducing production bugs by 25% and ensuring high-quality releases.
- Leveraged Docker and Kubernetes to containerize and orchestrate micro frontend applications, automating deployment processes and enabling on-demand scaling, which reduced deployment time by 30% and improved uptime during peak traffic periods.
- Integrated Kafka and RabbitMQ to enable real-time messaging across micro frontend components, reducing data synchronization latency by 20% and enhancing the responsiveness of critical notifications.

VASS **01.2012 – 12.2014**

Web Developer

- Delivered high-quality websites and a scalable SaaS platform utilizing Angular, Node.js, PostgreSQL, AWS DynamoDB, and GraphQL, supporting millions of concurrent users and ensuring robust performance.
- Leveraged Node.js to develop backend services, achieving 30% faster response times and improving overall application reliability.
- Implemented responsive, accessible designs and cross-browser compatibility, increasing user engagement by 15% across devices and platforms.
- Integrated third-party APIs for critical features, including payment processing, shipping, and analytics tracking, enhancing functionality and user experience.
- Built and deployed applications using AWS and Azure cloud services, enhancing scalability and reliability while reducing downtime by 25%.
- Optimized Angular and React applications using lazy loading, code splitting, efficient data caching, and advanced state management, resulting in 40% faster load times and improved performance.

EDUCATION

Catholic University of Pereira

04.2006 – 09.2011

Bachelor of Computer Science
