Results-driven and accomplished Senior Web Developer with over 10 years of experience designing and building scalable, high-performance web applications. Expert in developing modern, responsive frontends with React.js, Next.js, and architecting robust, cloud-native backends using Node.js, Express.js, and services on AWS and Azure.
Proficient across the entire Software Development Life Cycle (SDLC)—from architecture and development to CI/CD, automated testing, observability, and long-term support. A strong advocate for clean code, SOLID principles, and clean architecture, with a relentless focus on performance optimization, developer experience, and system scalability.
Thrives in Agile, cross-functional teams and contributes meaningfully to both technical and product strategy. Actively mentors junior engineers, leads code reviews, and promotes a culture of engineering excellence. Passionate about building user-centric, maintainable solutions that bridge business goals with technical innovation.

EXPERIENCE

DATES FROM – TO

JOB TITLE, COMPANY

- Actively contributed to a cross-functional Agile (Scrum) team, mentoring junior developers and conducting in-depth code reviews with a strong focus on SOLID principles, design patterns, and clean architecture to ensure long-term maintainability. Promoted a culture of continuous learning through pair programming, internal workshops, and technical documentation practices.
- Rebuilt a high-traffic customer-facing platform using React.js, Next.js, and Redux, integrating AWS IVS for real-time livestream auctions and Shopify Storefront API for seamless e-commerce integration—boosting user engagement and improving conversion rates. Applied performance best practices such as lazy loading, dynamic imports, and tree-shaking, reducing initial load time by 35%.
- Developed robust backend services with .NET Core (C#) and ASP.NET Web API, exposing both RESTful and GraphQL endpoints to handle structured/unstructured data stored in SQL Server and MongoDB. Used Entity Framework Core to manage data access and optimize query performance through compiled queries and caching.
- Designed and implemented a modular microservices architecture deployed on AWS ECS, using RabbitMQ for asynchronous communication between services. Ensured system scalability and fault tolerance by decoupling business logic and enhancing service orchestration.
- Led the development of a real-time, AI-driven customer support chatbot using Azure Functions, Azure API Management, Azure Cosmos DB, and Blob Storage, offering natural language processing (NLP) capabilities through integration with Azure Cognitive Services.
- Refactored legacy React components and improved backend API efficiency using asynchronous programming and response compression in .NET, leading to a 30% reduction in UI latency and improved mobile responsiveness.
- Built end-to-end CI/CD pipelines using GitHub Actions and Azure DevOps, automating unit tests (Jest), end-to-end tests (Cypress), linting, and infrastructure deployment. Ensured reliable and frequent delivery through feature flags, blue/green deployments, and rollback mechanisms.

Tech Stack:

React.js, Redux, Next.js, .NET Core (C#), ASP.NET Web API, GraphQL, REST API, SQL Server, MongoDB, PostgreSQL, Redis, Entity Framework Core, Shopify, AWS (ECS, IVS, API Gateway, S3, CloudWatch, IAM), Azure (Functions, API Management, Cosmos DB, Blob Storage, Cognitive Services), Docker, Terraform, Cypress, Jest, Playwright, RabbitMQ, WebSockets, Git, GitHub Actions, Azure DevOps, Postman, Figma, Notion, Jira, Adobe XD, Google Analytics, LogRocket, Sentry, AI/ML/NLP (OpenAI, Azure Cognitive Services, Hugging Face)

DATES FROM – TO

JOB TITLE, COMPANY

- Developed responsive, mobile-first user interfaces using React.js, Next.js, TypeScript, and Tailwind CSS, leading to a 40% increase in mobile retention and 30% boost in overall user engagement.
- Designed and implemented modular, component-based dashboards and internal tools, leveraging Redux for predictable state management across complex UI flows.
- Architected and maintained scalable backend services using Node.js and NestJS, organized as event-driven microservices powered by Kafka to enable real-time data streaming and decoupled service communication.
- Automated infrastructure provisioning with AWS CloudFormation and deployed containerized microservices on AWS ECS, reducing deployment cycle time by over 50% through CI/CD integration and container orchestration.
- Delivered real-time analytics pipelines and AI-driven sentiment analysis features by orchestrating AWS Lambda, S3, and DynamoDB, enhancing NLP prediction accuracy by 35%.
- Refactored legacy schemas and optimized database queries using TypeORM and PostgreSQL, reducing query latency by 15% and improving performance under load.
- Deployed and managed distributed systems using Kubernetes, enabling auto-scaling, self-healing, and high availability across mission-critical services.
- Practiced Test-Driven Development (TDD) using Jasmine for backend test coverage and contributed to observability efforts with AWS CloudWatch and APM tools, improving incident response and system visibility.

Tech Stack:

React.js, Redux, Next.js, TypeScript, Tailwind CSS, Node.js, NestJS, Kafka, REST API, GraphQL, TypeORM, PostgreSQL, MongoDB, AWS (Lambda, ECS, S3, DynamoDB, CloudFormation, CloudWatch, IAM), Docker, Kubernetes, Jasmine, Cypress, WebSockets, Ably, Git, GitHub Actions, Figma, Notion, Jira, LogRocket, Sentry, AI/ML/NLP (OpenAI, AWS Comprehend, Hugging Face)

DATES FROM – TO

JOB TITLE, COMPANY

- Built a high-performance Single Page Application (SPA) for a financial services platform using React.js, Next.js, Redux, and Shopify, resulting in a 30% increase in user engagement and significantly improved application responsiveness.
- Modernized legacy systems by refactoring PHP and Laravel codebases, and developing scalable RESTful APIs with Node.js and Express.js, reducing server response times by 40% and improving backend maintainability.
- Applied advanced frontend performance optimization techniques including code splitting, tree shaking, minification, image compression, and CSS sprite mapping—resulting in a 35% reduction in initial load time and achieving a top-5 ranking on Google Search through structured data and SEO improvements.
- Delivered mobile-first and AMP-compliant experiences across Shopify and Express-based systems, increasing mobile user traffic by 25%. Leveraged localStorage and sessionStorage for client-side caching and session persistence.
- Defined and implemented automated testing strategies using Jest for unit testing and Cypress for end-to-end testing, reducing post-deployment defects by 75% and accelerating release velocity through Git-based CI/CD pipelines.
- Partnered with UX/UI designers using Adobe XD to reimagine complex enterprise dashboards; rebuilt interfaces using Next.js and Redux, resulting in a 50% boost in navigation speed and a 25% increase in productivity for internal users.

Tech Stack:

React, Next, Redux, Angular, RxJS, TypeScript, JavaScript, Node.js, Express.js, PHP, Laravel, Shopify, WordPress, REST API, MySQL, Jest, Cypress, Git, CI/CD, AMP, Adobe XD

JOB TITLE, COMPANY

- Built a high-performance Single Page Application (SPA) for a financial services platform using React.js, Next.js, Redux, and Shopify, resulting in a 30% increase in user engagement and significantly improved responsiveness.
- Led modernization of legacy systems by refactoring PHP and Laravel codebases and developing scalable RESTful APIs with Node.js and Express.js, reducing server response times by 40% and improving maintainability.
- Applied advanced frontend performance techniques—including code splitting, tree shaking, minification, image compression, and CSS sprite mapping—achieving a 35% reduction in load time and improved SEO performance (Top-5 Google ranking).
- Delivered mobile-first and AMP-compliant experiences across Shopify and Express.js systems, increasing mobile traffic by 25% through responsive design and optimized session handling using localStorage and sessionStorage.
- Defined and implemented an automated testing strategy with Jest (unit tests) and Cypress (E2E tests), reducing post-deployment bugs by 75% and improving release velocity via Git-based CI/CD pipelines.
- Collaborated closely with UX/UI designers using Adobe XD to redesign complex enterprise dashboards. Rebuilt interfaces with Next.js and Redux, resulting in a 50% faster navigation experience and 25% productivity boost for internal teams.

Tech Stack:

React, HTML5, CSS3, JavaScript (ES6+), ECMAScript, SASS, AngularJS (1.x, 2.x, 4.x), Backbone.js, Node.js, Express.js, REST API, Gulp, Grunt, NPM, SQL, PL/SQL, Google Analytics, CI/CD, SEO Optimization, Git

EDUCATION

04.2009 – 09.2014

Bachelor of Computer Science, UNIVERSIDAD CATÓLICA DE PEREIRA

SKILLS

- **Languages**
  JavaScript (ES6+), TypeScript, C#, HTML5, CSS3, SQL, Python (for scripting and automation)
- **Frameworks and Libraries**
  React.js, Next.js, Redux, RxJS, Tailwind CSS, REST API, GraphQL, React Query, Axios, Storybook, ASP.NET Core, .NET 6/7, Entity Framework Core, Web API, SignalR, gRPC, MediatR, RESTful Services
- **Testing & Methodologies**
  Test-Driven Development (TDD), SOLID Principles, Agile (Scrum), Clean Architecture, Microservices, xUnit, NUnit, Jest, Cypress, Playwright
- **Database Management System**
  MySQL, MS SQL, PostgreSQL, MongoDB, AWS DynamoDB, AWS RDS, Azure SQL Database
- **IDEs and Tools**
  Visual Studio Code, Jenkins, Cypress, Jest, Jasmine, Terraform, Docker, Kubernetes, Redux DevTools, Babel, Webpack, Storybook, Azure DevOps, Git Bash, PowerShell
- **Cloud Services**
  AWS Cloud Services, Microsoft Azure, GCP
