Results-driven and highly experienced Senior Web Developer with over a decade of expertise in building scalable, high-performance web applications. Adept at developing modern, responsive frontends using React.js, Next.js, and architecting robust backends with Node.js, Express, and cloud-native services. Skilled across the entire SDLC, from architecture and development to CI/CD, testing, and long-term support.
Thrives in Agile, cross-functional teams, consistently contributing to both technical and product strategy. Committed to clean code, SOLID principles, and clean architecture, with a strong focus on developer experience, performance optimization, and system scalability. Recognized for mentoring junior engineers and fostering best practices in engineering culture. Passionate about building maintainable, user-centric solutions that align business goals with technical excellence.

EXPERIENCE

DATES FROM – TO

JOB TITLE, COMPANY

- Played a key role in a cross-functional Agile (Scrum) team, mentoring junior developers and conducting in-depth code reviews that emphasized SOLID principles, design patterns, and clean architecture for long-term maintainability. Fostered a culture of knowledge sharing through regular tech talks and pair programming sessions.
- Rebuilt a high-traffic customer-facing platform using React.js, Next.js, and Redux, integrating AWS IVS for real-time livestream auctions and the Shopify Storefront API to enable seamless e-commerce functionality—boosting user engagement and conversion rates. Introduced lazy loading and code-splitting strategies to reduce initial load times by over 35%.
- Engineered scalable backend services using Node.js, Express.js, and GraphQL, managing structured and unstructured data in MongoDB and MySQL. Utilized TypeORM to optimize complex data relationships and reduce query response time by 20%.
- Architected and deployed a microservices-based system on AWS ECS, using RabbitMQ for asynchronous inter-service communication. This architecture significantly improved system scalability, resiliency, and modularity across distributed services.
- Led the development of an intelligent, real-time AI-powered chatbot using AWS Lambda, API Gateway, DynamoDB, and S3, enabling event-driven customer support with natural language understanding. Integrated the bot with internal knowledge bases and analytics dashboards for continuous improvement.
- Optimized performance across the stack by refactoring inefficient React components and Node.js APIs, reducing navigation latency by 30% and improving responsiveness across mobile and desktop. Conducted profiling using Chrome DevTools and Node.js Inspector to resolve performance bottlenecks.
- Implemented robust CI/CD pipelines with GitHub Actions, automating unit testing (Jest), end-to-end testing (Cypress), linting, and deployments—reducing release turnaround time by 22% and improving deployment reliability. Ensured a zero-downtime deployment strategy with blue/green deployments and feature flag toggles.

Tech Stack:

React.js, Redux, Next.js, Node.js, Express.js, GraphQL, REST API, MongoDB, MySQL, PostgreSQL, Redis, TypeORM, Prisma, NestJS, Shopify, AWS (Lambda, ECS, API Gateway, AppSync, S3, IVS, DynamoDB, CloudWatch, CloudFormation, IAM), Docker, Terraform, Vercel, Cypress, Jest, Playwright, MSW, RabbitMQ, WebSockets, Ably, Git, GitHub Actions, Postman, Figma, Notion, Jira, Adobe XD, Google Analytics, LogRocket, Sentry, AI/ML/NLP (OpenAI, AWS Comprehend, AWS Lex, Hugging Face, spaCy)

DATES FROM – TO

JOB TITLE, COMPANY

- Engineered responsive, mobile-first UIs using React.js, Next.js, TypeScript, and Tailwind CSS, resulting in a 40% improvement in mobile user retention and a 30% increase in overall engagement.
- Designed and implemented modular, component-driven dashboards and internal tools, leveraging Redux to maintain a predictable and scalable state architecture.
- Built and maintained scalable backend services with Node.js and NestJS, structured as event-driven microservices using Kafka to ensure efficient data flow across distributed systems.
- Provisioned cloud infrastructure with AWS CloudFormation and deployed Dockerized microservices to AWS ECS, cutting deployment cycle times in half through automation and container orchestration.
- Delivered real-time analytics and AI-powered sentiment analysis pipelines using AWS Lambda, S3, and DynamoDB, achieving a 35% increase in prediction accuracy for NLP models.
- Refactored database schemas and optimized complex queries in PostgreSQL using TypeORM, reducing response times by 15% and improving system responsiveness under load.
- Orchestrated distributed applications on Kubernetes, enabling high availability, auto-scaling, and self-healing capabilities across mission-critical services.
- Practiced Test-Driven Development (TDD) with Jasmine for backend unit testing and contributed to monitoring and observability strategies using AWS CloudWatch and Application Performance Monitoring (APM) tools.

Tech Stack:

React.js, Redux, Next.js, TypeScript, Tailwind CSS, Node.js, NestJS, Kafka, REST API, GraphQL, TypeORM, PostgreSQL, MongoDB, AWS (Lambda, ECS, S3, DynamoDB, CloudFormation, CloudWatch, IAM), Docker, Kubernetes, Jasmine, Cypress, WebSockets, Ably, Git, GitHub Actions, Figma, Notion, Jira, LogRocket, Sentry, OpenAI, AWS Comprehend, Hugging Face

DATES FROM – TO

JOB TITLE, COMPANY

- Built a high-performance Single Page Application (SPA) for a financial services platform using React.js, Next.js, Redux, and Shopify, resulting in a 30% increase in user engagement and significantly improved application responsiveness.
- Modernized legacy systems by refactoring PHP and Laravel codebases, and developing scalable RESTful APIs with Node.js and Express.js, reducing server response times by 40% and improving backend maintainability.
- Applied advanced frontend performance optimization techniques including code splitting, tree shaking, minification, image compression, and CSS sprite mapping—resulting in a 35% reduction in initial load time and achieving a top-5 ranking on Google Search through structured data and SEO improvements.
- Delivered mobile-first and AMP-compliant experiences across Shopify and Express-based systems, increasing mobile user traffic by 25%. Leveraged localStorage and sessionStorage for client-side caching and session persistence.
- Defined and implemented automated testing strategies using Jest for unit testing and Cypress for end-to-end testing, reducing post-deployment defects by 75% and accelerating release velocity through Git-based CI/CD pipelines.
- Partnered with UX/UI designers using Adobe XD to reimagine complex enterprise dashboards; rebuilt interfaces using Next.js and Redux, resulting in a 50% boost in navigation speed and a 25% increase in productivity for internal users.

Tech Stack:

React, Next, Redux, Angular, RxJS, TypeScript, JavaScript, Node.js, Express.js, PHP, Laravel, Shopify, WordPress, REST API, MySQL, Jest, Cypress, Git, CI/CD, AMP, Adobe XD

DATES FROM – TO

JOB TITLE, COMPANY

- Built responsive, standards-compliant web applications using HTML5, CSS3, SASS, and JavaScript (ES6+), aligning with modern Web 2.0 accessibility and usability best practices.
- Developed reusable and testable UI components using React.js and Backbone.js, applying modular architecture principles and dependency injection to improve maintainability and scalability.
- Engineered scalable, high-performance RESTful APIs using Node.js and Express.js, leveraging asynchronous programming and custom middleware for efficient request handling.
- Automated development workflows using Gulp, Grunt, and NPM scripts to manage builds, preprocess stylesheets, and optimize static assets—accelerating deployment readiness.
- Worked closely with backend engineering teams to integrate APIs, caching mechanisms, and proxy services, enabling reliable CI/CD pipelines with custom build and test automation.
- Authored complex PL/SQL stored procedures and optimized SQL queries involving temporary tables, joins, and procedural logic to support data-heavy reporting and transformation use cases.
- Integrated Google Analytics and custom tracking mechanisms to gather actionable user behavior data, leading to UX improvements and optimized conversion paths.
- Reduced page load times by 35% through performance optimizations such as code minification, lazy loading, image compression, and CSS sprite usage, boosting SEO rankings into the top 5 on Google SERPs.

Tech Stack:

React, HTML5, CSS3, JavaScript (ES6+), ECMAScript, SASS, AngularJS (1.x, 2.x, 4.x), Backbone.js, Node.js, Express.js, REST API, Gulp, Grunt, NPM, SQL, PL/SQL, Google Analytics, CI/CD, SEO Optimization, Git

EDUCATION

04.2009 – 09.2014

Bachelor of Computer Science, UNIVERSIDAD CATÓLICA DE PEREIRA

SKILLS

- **Languages**
  JS(ES6), TS, Python, C#, C++, Rust, PHP, Java, Ruby
  HTML5, CSS, SQL
- **Frameworks and Libraries**
  ReactJS, NextJS, NodeJS, Express, React Native, Redux, RxJS, REST API, GraphQL, Ably, Laravel, Tailwind CSS, RabbitMQ, Kafka, TypeORM, Shopify, WordPress, JPA, Java Spring Boot, Gatesby
- **Methodologies & Testing**
  Diagnosing, Business Analysts, Problem Solving, Full Stack Development Leadership, Algorithm Design, Team Oriented, SOLID, Agile (Scrum), Microservices, Test-Driven Development (TDD)
- **Database Management System**
  MySQL, MS SQL, PostgreSQL, MongoDB, AWS DynamoDB, AWS RDS, Azure SQL Database
- **IDEs and Tools**
  Visual Studio Code, Jenkins, Cypress, Jest, Jasmine, Terraform, Docker, Kubernetes, Redux DevTools, Babel, Webpack, Storybook, Azure DevOps, Git Bash, PowerShell
- **Cloud Services**
  AWS Cloud Services, Microsoft Azure, GCP
