Sebastian Tamayo

Senior Software Engineer

+57 3113698653• sebstiantamayo629@outlook.com• https://www.linkedin.com/in/sebastian-tamayo-pro/ • Pereira, Colombia

Results-driven and passionate Senior Web Developer with over a decade of experience designing, developing, and deploying scalable, intuitive, and high-performance web applications. Specializes in building modern, responsive frontends with Angular and architecting robust backends using .NET, RESTful APIs, and cloud-native services. Proficient across the entire software development lifecycle—from requirements gathering and system architecture to CI/CD deployment, testing, and long-term maintenance.

Thrives in Agile, cross-functional environments, contributing to both product and engineering discussions with a strong focus on user-centric design, code quality, and developer experience. Known for writing clean, maintainable, and well-documented code while mentoring junior developers and driving adherence to SOLID principles and clean architecture standards.

Deeply committed to continuous learning and staying up to date with evolving web technologies, cloud infrastructure, and DevOps practices. Strong advocate for performance optimization, system scalability, and building sustainable, long-lived digital products that provide real value to end users and business stakeholders.

PROFESSIONAL EXPERIENCE

UST

Senior Software Engineer

June 2022 – June 2025 (3 years 2 months)

- Collaborated within a cross-functional Agile (Scrum) team, mentoring junior developers and conducting code reviews with an emphasis on SOLID principles, design patterns, and clean architecture best practices.
- Spearheaded the reengineering of the customer-facing web platform using Angular, enhancing performance, accessibility, and responsiveness. Integrated live auction streaming using Azure Media Services and Shopify Storefront API, significantly increasing user engagement and conversion rates.
- Designed and maintained scalable backend services using .NET Core (C#) and Entity Framework, with relational data persisted in SQL Server and NoSQL data managed via MongoDB. Improved query performance and relational mapping through advanced LINQ and indexing strategies, reducing average data retrieval time by over 20%.
- Architected a robust microservices-based system deployed on Azure Kubernetes Service (AKS), with Azure Service Bus facilitating asynchronous, decoupled communication between modules. This improved scalability, system resilience, and modular service ownership.
- Led the implementation of a real-time AI-driven chatbot, integrating Azure Cognitive Services, Azure Functions, and Cosmos DB to support intelligent, event-driven user interactions and enhance automated customer support.
- Optimized overall platform performance by refactoring Angular components and backend business logic, achieving over a 30% reduction in navigational latency and improving overall user satisfaction.
- Developed and maintained CI/CD pipelines using Azure DevOps, incorporating automated testing, linting, and deployment workflows. Reduced average release cycles by 22% while ensuring code quality and reliability through unit testing with xUnit and Jasmine/Karma and end-to-end testing with Cypress.

Tech Stack:

Angular, RxJS, NgRx, TypeScript, .NET Core, ASP.NET Web API, Entity Framework Core, SQL Server, REST API, GraphQL, RabbitMQ, Redis, Docker, Kubernetes, AWS (EC2, S3, RDS, IAM, CloudWatch), Azure DevOps, Git, GitHub Actions, Postman, Swagger, Jest, Cypress, Figma, Notion, Jira, Sentry, LogRocket, AI/ML (Azure Cognitive Services, OpenAI)

Gorilla Logic

Full Stack Engineer

February 2018 – May 2022 (4 years 4 months)

- Designed and implemented responsive, mobile-first user interfaces using Angular, TypeScript, RxJS, and SCSS, resulting in a 40% increase in mobile user retention and a 30% improvement in overall user engagement.
- Built dynamic, component-based UIs for enterprise-level dashboards and tools, incorporating NgRx for scalable and maintainable state management.
- Developed secure, high-performance backend services using .NET Core and ASP.NET Web API, structured with a microservices architecture and integrated with Kafka for real-time, event-driven communication between services.
- Automated infrastructure provisioning with AWS CloudFormation and deployed containerized applications using Docker on AWS ECS, reducing deployment time by 50% and improving operational efficiency.
- Architected real-time data pipelines for analytics and sentiment analysis using Azure Functions, Blob Storage, and Cosmos DB, leading to a 35% improvement in AI-driven prediction accuracy.
- Tuned and optimized SQL Server performance by refactoring data models and stored procedures via Entity Framework Core, improving query efficiency and response times by 15%.
- Managed scalable, distributed services using Kubernetes, ensuring high availability, fault tolerance, and zero-downtime deployments across critical business modules.
- Practiced Test-Driven Development (TDD) using xUnit and Jasmine, while implementing robust observability strategies through AWS CloudWatch, Application Insights, and other APM tools for proactive performance monitoring.

Tech Stack:

Angular, TypeScript, RxJS, NgRx, SCSS, .NET Core, ASP.NET Web API, Entity Framework Core, SQL Server, Kafka, REST API, Docker, Kubernetes, AWS (ECS, CloudFormation, CloudWatch, S3), Azure Functions, Cosmos DB, Blob Storage, xUnit, Jasmine, Git, GitHub Actions, Postman, Application Insights, Figma, Notion, Jira

Sophos Solutions

5 years 6 months

Senior Web Developer

September 2015 – February 2018 (2 years 6 months)

- Played a key role in developing a high-performance Single Page Application (SPA) for the financial sector using Angular, RxJS, and NgRx, achieving a 30% improvement in user engagement and application responsiveness.
- Modernized legacy PHP and Laravel codebases by refactoring into modular components and transitioning backend services to .NET Core Web APIs, resulting in a 40% decrease in server response times and enhanced code maintainability.
- Implemented advanced frontend performance strategies including code splitting, lazy loading, tree shaking, minification, and image optimization, reducing initial load time by 35% and boosting SEO through structured metadata and schema integration.
- Built mobile-first and AMP-compliant user experiences with Angular, significantly improving accessibility and increasing mobile traffic by 25%. Enhanced client-side persistence and performance with localStorage and sessionStorage strategies.
- Set up comprehensive automated testing pipelines using Jasmine, Karma, and Cypress for unit and end-to-end testing. Reduced production bugs by 75% and accelerated release cycles through Git-based CI/CD pipelines.
- Partnered closely with UX/UI designers using Adobe XD and led the redesign of enterprise dashboards in Angular, improving internal navigation efficiency by 50% and increasing team productivity by 25%.

Tech Stack:

Angular, RxJS, NgRx, TypeScript, SCSS, .NET Core, ASP.NET Web API, Entity Framework Core, SQL Server, REST API, AMP, Cypress, Jasmine, Karma, Git, GitHub Actions, localStorage, sessionStorage, Adobe XD, Figma, Jira, Notion

Web Developer

September 2012 – February 2015 (2 years 6 months)

- Developed responsive, accessible, and standards-compliant web applications using HTML5, CSS3, TypeScript, and Angular, in alignment with modern usability and Web Content Accessibility Guidelines (WCAG).
- Designed and implemented modular, reusable UI components using Angular (v12+), leveraging dependency injection, reactive forms, and component lifecycle best practices for maintainable and scalable frontend architecture.
- Built robust and scalable RESTful APIs using .NET MVC Web API, applying asynchronous programming patterns, middleware pipelines, and proper routing configurations to support high-performance enterprise applications.
- Automated frontend build and deployment processes using Angular CLI and MSBuild, managing environment-specific configurations, resource bundling, and code optimization for faster release cycles.
- Collaborated with cross-functional backend teams to integrate .NET APIs, implement caching strategies with Redis, and fine-tune CI/CD workflows using Azure DevOps and GitHub Actions for streamlined deployment.
- Developed complex SQL Server stored procedures and optimized T-SQL queries to support data-intensive reporting and analytics, employing temporary tables, indexing strategies, and procedural logic.
- Integrated Google Analytics and custom telemetry tools to monitor user interactions and performance metrics, driving data-informed UX and design decisions that improved conversion rates.
- Achieved a 35% reduction in page load time through frontend performance optimization techniques including lazy loading, tree shaking, minification, image compression, and CSS sprites, significantly boosting SEO rankings.

Tech Stack:

Angular, TypeScript, RxJS, SCSS, .NET MVC, ASP.NET Web API, SQL Server, T-SQL, REST API, Azure DevOps, MSBuild, GitHub Actions, Redis, Google Analytics, Postman, Figma, Notion, Git, HTML5, CSS3

EDUCATION

Universidad Católica de Pereira

04.2005 – 09.2012

Bachelor of Computer Science

SKILLS

Languages:	C++, JS(ES6), TS, Python, C#, Rust, PHP, Java, HTML5
Frameworks and Libraries:	Angular, React.js, Next.js, Gatesby,.Net Core, .Net MVC, Node.js, Express, React Native, Redux, RxJS, REST API, GraphQL, Ably, Laravel, Tailwind CSS, RabbitMQ, Kafka, TypeORM, Shopify, WordPress, Entity Framework
DBMS	MySQL, MS SQL, PostgreSQL, MongoDB, AWS DynamoDB, AWS RDS, Azure SQL Database
IDEs and Tools:	Visual Studio Code, Jenkins, Cypress, Jest, Jasmine, Terraform, Docker, Kubernetes, Redux DevTools, Babel, Webpack, Storybook, Azure DevOps, Git Bash, PowerShell
Cloud Services:	AWS Cloud Services, Microsoft Azure, GCP
Other skills:	Problem Solving, Full Stack Development, Critical Thinking, Leadership, Algorithm Design, Team-Oriented, SOLID, Agile (Scrum), Microservices, Test-Driven Development (TDD), Diagnosing, Business Analysts
