Sebastian Tamayo

Senior Software Engineer

+57 3113698653• sebstiantamayo629@outlook.com• https://www.linkedin.com/in/sebastian-tamayo-pro/ • Pereira, Colombia

Results-driven and passionate Senior Web Developer with over a decade of experience designing, developing, and delivering scalable, intuitive, and high-performance web applications. Adept at crafting modern, responsive user interfaces using React.js and engineering robust backend systems with .NET Core, RESTful APIs, and cloud-native services. Brings comprehensive expertise across the entire software development lifecycle—from requirements analysis and system architecture to CI/CD automation, quality assurance, and long-term application maintenance.

Thrives in Agile, cross-functional teams, actively contributing to both product strategy and engineering execution with a strong emphasis on user-centric design, code quality, and developer experience. Recognized for writing clean, maintainable, and well-documented codebases while mentoring junior developers and promoting adherence to SOLID principles, clean architecture, and scalable design patterns.

Dedicated to continuous learning and staying current with the latest in web technologies, cloud infrastructure, and DevOps practices. A strong advocate for performance optimization, system reliability, and building maintainable, future-proof software solutions that deliver measurable value to both users and stakeholders.

PROFESSIONAL EXPERIENCE

UST

Senior Software Engineer

June 2022 – June 2025 (3 years)

- Collaborated within a cross-functional Agile (Scrum) team, mentoring junior developers and performing in-depth code reviews focused on SOLID principles, design patterns, and clean architecture practices.
- Spearheaded the reengineering of a customer-facing web platform using React.js, improving accessibility, responsiveness, and rendering performance. Integrated live auction streaming with Azure Media Services and the Shopify Storefront API, resulting in a measurable boost in user engagement and conversion rates.
- Designed and maintained scalable backend services using .NET Core (C#) and Entity Framework, with relational data persisted in SQL Server and NoSQL datasets handled via MongoDB. Enhanced query efficiency through optimized LINQ expressions, indexing strategies, and schema refactoring—achieving a 20% reduction in average data retrieval time.
- Architected and deployed a robust microservices architecture on Azure Kubernetes Service (AKS), utilizing Azure Service Bus to enable asynchronous, decoupled communication across domains, which improved scalability and system resilience.
- Led the development of a real-time, AI-powered chatbot using Azure Cognitive Services, Azure Functions, and Cosmos DB to deliver event-driven, intelligent customer interactions, significantly automating and improving user support workflows.
- Optimized overall system performance by refactoring React components, implementing lazy loading, and streamlining backend business logic—resulting in a 30% reduction in page load time and improved user experience.
- Designed and maintained CI/CD pipelines with Azure DevOps, integrating automated testing, linting, and deployment stages. Ensured high application reliability and reduced release cycle time by 22% through robust test coverage using xUnit for backend logic, Jest for frontend unit testing, and Cypress for end-to-end testing.

Tech Stack: React.js, Redux, TypeScript, .NET Core, C#, Entity Framework, SQL Server, MongoDB, Azure (Media Services, Functions, Service Bus, Cosmos DB, AKS, DevOps), Docker, Kubernetes, Shopify Storefront API, Cypress, Jest, xUnit, Git, Figma, Postman, Jira, Adobe XD

Gorilla Logic

Full Stack Engineer

February 2018 – May 2022 (4 years 4 months)

- Designed and implemented responsive, mobile-first user interfaces using React.js, TypeScript, and SCSS, leading to a 40% increase in mobile user retention and a 30% boost in overall user engagement.
- Built dynamic, component-driven UIs for enterprise-grade dashboards, leveraging Redux for scalable state management and ensuring long-term maintainability across cross-functional modules.
- Developed secure, high-performance backend services with .NET Core and ASP.NET Web API, applying microservices architecture principles and integrating Kafka for real-time, event-driven communication across distributed systems.
- Automated infrastructure provisioning using AWS CloudFormation, and deployed containerized applications with Docker on AWS ECS, which reduced deployment time by 50% and improved operational agility.
- Engineered real-time analytics and sentiment analysis pipelines utilizing Azure Functions, Blob Storage, and Cosmos DB, resulting in a 35% improvement in AI-driven prediction accuracy.
- Optimized SQL Server performance through advanced tuning of data models and stored procedures using Entity Framework Core, achieving a 15% reduction in query latency and improved database efficiency.
- Managed distributed, production-grade services with Kubernetes, enabling high availability, fault tolerance, and zero-downtime deployments across critical business services.
- Adhered to Test-Driven Development (TDD) using xUnit and Jest, while implementing observability practices via AWS CloudWatch, Application Insights, and APM tools to support real-time diagnostics and proactive system health monitoring.

Tech Stack: React.js, TypeScript, Redux, SCSS, .NET Core, ASP.NET Web API, Entity Framework Core, SQL Server, Kafka, Azure Functions, Cosmos DB, Blob Storage, AWS ECS, AWS CloudFormation, Docker, Kubernetes, AWS CloudWatch, Application Insights, xUnit, Jest, Git, Jira, Postman

Sophos Solutions

5 years 6 months

Senior Web Developer

September 2015 – February 2018 (2 years 6 months)

- Contributed to the development of a high-performance Single Page Application (SPA) for the financial sector using React.js, Redux, and React Hooks, leading to a 30% improvement in user engagement and application responsiveness.
- Refactored legacy PHP and Laravel systems into modular, maintainable components while transitioning backend services to .NET MVC Web APIs, reducing server response times by 40% and improving long-term maintainability.
- Applied advanced frontend performance optimization techniques such as code splitting, lazy loading, tree shaking, minification, and image compression, decreasing initial load time by 35% and boosting SEO through structured data and metadata integration.
- Delivered mobile-first, AMP-compliant user experiences using React and responsive design practices, increasing mobile traffic by 25% and ensuring WCAG-compliant accessibility across devices.
- Built automated testing workflows using Jest, React Testing Library, and Cypress, improving release stability and reducing production defects by 75% through integrated Git-based CI/CD pipelines.
- Collaborated closely with UX/UI designers in Adobe XD, leading the redesign of enterprise dashboards with React and Redux, which enhanced navigation speed by 50% and increased team-wide productivity by 25%..

Tech Stack: React.js, Redux, TypeScript, .NET MVC, ASP.NET Web API, SQL Server, Jest, Cypress, React Testing Library, Docker, Git, GitHub Actions, CI/CD, Adobe XD, localStorage, sessionStorage, Web Vitals, Lighthouse, SEO Optimization, AMP, Postman

Web Developer

September 2012 – February 2015 (2 years 6 months)

- Developed responsive, accessible, and standards-compliant web applications using React.js, TypeScript, HTML5, and CSS3, adhering to modern usability principles and WCAG accessibility standards.
- Engineered modular and reusable React components using functional programming, hooks (e.g., useEffect, useContext), and context-based state management, ensuring a maintainable and scalable frontend architecture.
- Built robust, scalable RESTful APIs with .NET MVC Web API, implementing asynchronous patterns, middleware pipelines, and clean routing strategies to support high-throughput enterprise systems.
- Streamlined build and deployment processes using Webpack, Vite, and MSBuild, managing environment-specific configurations, asset bundling, and production optimizations to accelerate release cycles.
- Partnered with backend teams to integrate .NET services, configure caching strategies using Redis, and optimize CI/CD workflows via Azure DevOps and GitHub Actions for efficient and reliable deployments.
- Designed and optimized complex SQL Server stored procedures and T-SQL queries to power analytical dashboards, leveraging indexing, CTEs, and procedural logic for performance and scalability.
- Integrated Google Analytics and custom telemetry solutions to track user behavior and system performance, informing UX decisions that led to measurable improvements in conversion rates.
- Achieved a 35% reduction in page load time through frontend optimization techniques such as lazy loading, tree shaking, image compression, and minification, resulting in a significant boost to SEO rankings and overall UX.

Tech Stack: React.js, TypeScript, ASP.NET Web API, SQL Server, Redis, Azure DevOps, GitHub Actions, MSBuild, Webpack, Vite, Jest, React Testing Library, Google Analytics, HTML5, CSS3, SEO, WCAG, Telemetry

EDUCATION

Universidad Católica de Pereira 04.2005 – 09.2012

Bachelor of Computer Science

SKILLS

Languages:	C++, JS(ES6), TS, Python, C#, Rust, PHP, Java, HTML5
Frameworks and Libraries:	React.js, Next.js, Gatesby, Angular, .Net Core, .Net MVC, Node.js, Express, React Native, Redux, RxJS, REST API, GraphQL, Ably, Laravel, Tailwind CSS, RabbitMQ, Kafka, Shopify, WordPress, Entity Framework
DBMS	MySQL, MS SQL, PostgreSQL, MongoDB, AWS DynamoDB, AWS RDS, Azure SQL Database
IDEs and Tools:	Visual Studio Code, Jenkins, Cypress, Jest, Jasmine, Terraform, Docker, Kubernetes, Redux DevTools, Babel, Webpack, Storybook, Azure DevOps, Git Bash, PowerShell
Cloud Services:	AWS Cloud Services, Microsoft Azure, GCP
Other skills:	Problem Solving, Full Stack Development, Critical Thinking, Leadership, Algorithm Design, Team-Oriented, SOLID, Agile (Scrum), Microservices, Test-Driven Development (TDD), Diagnosing, Business Analysts
