Sebastian Tamayo

Senior Software Engineer

+57 3113698653• sebstiantamayo629@outlook.com• https://www.linkedin.com/in/sebastian-tamayo-pro/ • Pereira, Colombia

Results-driven Senior Web Developer with over a decade of experience architecting, developing, and delivering scalable, high-performance web applications. Specializes in building intuitive, responsive user interfaces using React.js and designing resilient backend systems with Java Spring Boot, RESTful APIs, and cloud-native architectures.

Possesses full-lifecycle expertise—from requirements gathering and system design to CI/CD implementation, testing, and long-term support. Excels in Agile, cross-functional environments, where collaboration, fast iteration, and stakeholder alignment are key to successful product delivery.

Recognized for writing clean, maintainable, and well-structured code, mentoring junior developers, and championing SOLID principles, clean architecture, and test-driven development (TDD). Adept at leading technical discussions, implementing design patterns, and optimizing for both performance and scalability.

Committed to continuous learning, with deep interest in modern web technologies, cloud infrastructure, and DevOps automation. Focused on building sustainable, user-centered software solutions that solve real business problems and deliver measurable impact.

PROFESSIONAL EXPERIENCE

UST

Senior Software Engineer

June 2022 – June 2025 (3 years)

- Collaborated within a cross-functional Agile (Scrum) team, mentoring junior developers and conducting thorough code reviews with a focus on SOLID principles, design patterns, and clean architecture best practices.
- Spearheaded the modernization of a high-traffic customer-facing platform using React.js, improving accessibility, responsiveness, and client-side rendering performance. Integrated live auction streaming via Azure Media Services and the Shopify Storefront API, leading to increased user engagement and conversion.
- Designed and maintained scalable backend services with Java Spring Boot and Spring Data JPA, leveraging PostgreSQL and MongoDB for relational and NoSQL storage. Implemented advanced query optimization, indexing strategies, and schema improvements, reducing average data retrieval latency by over 20%.
- Architected a resilient microservices-based system on Azure Kubernetes Service (AKS), using Azure Service Bus for asynchronous messaging between distributed services. Enhanced modularity, fault tolerance, and overall system scalability.
- Led the development of an AI-powered chatbot integrated with Azure Cognitive Services, Azure Functions, and Cosmos DB, enabling intelligent, real-time user interactions that significantly improved customer service efficiency.
- Boosted frontend and backend performance by optimizing React components (via lazy loading, memoization, and suspense boundaries) and streamlining business logic, resulting in a 30% improvement in page load speed and user satisfaction.
- Built and maintained robust CI/CD pipelines using Azure DevOps, incorporating automated testing, linting, and deployment workflows. Reduced release times by 22% while ensuring high stability through test suites built with JUnit (backend), Jest (frontend), and Cypress (end-to-end).

Tech Stack:

React.js, Redux, TypeScript, Java, Spring Boot, Spring Data JPA, Spring Security, PostgreSQL, MongoDB, Azure (Media Services, Functions, Service Bus, Cosmos DB, AKS, DevOps), Docker, Kubernetes, Shopify Storefront API, Cypress, Jest, JUnit, Git, Figma, Postman, Jira, Adobe XD

Gorilla Logic

Full Stack Engineer

February 2018 – May 2022 (4 years 4 months)

- Designed and implemented responsive, mobile-first user interfaces using React.js, TypeScript, and SCSS, resulting in a 40% increase in mobile user retention and a 30% improvement in overall engagement.
- Developed scalable, modular frontend components for enterprise-grade dashboards, utilizing Redux for robust state management and ensuring long-term maintainability across cross-functional applications.
- Built secure, high-performance backend services using Java Spring Boot, applying microservices architecture principles and integrating Apache Kafka to support real-time, event-driven communication across distributed systems.
- Automated infrastructure provisioning with AWS CloudFormation and deployed containerized services using Docker on AWS ECS, reducing deployment time by 50% and enhancing operational agility.
- Engineered real-time analytics and sentiment analysis pipelines leveraging AWS Lambda, S3, and DynamoDB, driving a 35% increase in the accuracy of AI-driven predictions.
- Optimized relational database performance using PostgreSQL, advanced query tuning, and Spring Data JPA, achieving a 15% reduction in query latency and improved data throughput.
- Managed resilient, distributed microservices on Kubernetes, ensuring high availability, zero-downtime deployments, and fault tolerance across critical business platforms.
- Practiced Test-Driven Development (TDD) using JUnit and Jest, while implementing comprehensive observability with AWS CloudWatch, Elastic APM, and Prometheus/Grafana for real-time diagnostics and system health monitoring.

Tech Stack: React.js, TypeScript, Redux, SCSS, Java, Spring Boot, Spring Data JPA, PostgreSQL, Apache Kafka, REST API, AWS (Lambda, ECS, S3, CloudFormation, DynamoDB, CloudWatch), Docker, Kubernetes, Application Insights, Prometheus, Grafana, JUnit, Jest, Git, Jira, Postman

Sophos Solutions

5 years 6 months

Senior Web Developer

September 2015 – February 2018 (2 years 6 months)

- Contributed to the development of a high-performance Single Page Application (SPA) for a financial services platform using React.js, Redux, and React Hooks, resulting in a 30% increase in user engagement and overall application responsiveness.
- Modernized legacy systems by refactoring PHP and Laravel codebases into modular frontend components and transitioning backend services to Java Spring Boot REST APIs, achieving a 40% reduction in server response times and improving long-term scalability.
- Implemented advanced frontend performance optimizations including code splitting, lazy loading, tree shaking, and image compression, reducing initial load times by 35% and improving SEO through structured metadata and schema markup.
- Delivered fully responsive, mobile-first user experiences with AMP-compliant React interfaces and ensured WCAG accessibility compliance, increasing mobile traffic by 25% across devices and platforms.
- Developed robust test coverage using Jest, React Testing Library, and Cypress, integrated into Git-based CI/CD pipelines, which reduced production bugs by 75% and improved overall release quality.
- Collaborated with UX/UI teams using Adobe XD to redesign enterprise dashboards, resulting in a 50% improvement in navigation speed and a 25% increase in development team productivity.

Tech Stack: React.js, TypeScript, Redux, React Hooks, SCSS, Java, Spring Boot, REST API, PostgreSQL, Apache Kafka, Jest, React Testing Library, Cypress, Git, GitHub Actions, Docker, AWS (ECS, Lambda, S3), Adobe XD, Jira, Postman

Web Developer

September 2012 – February 2015 (2 years 6 months)

- Developed responsive, accessible, and standards-compliant web applications using React.js, TypeScript, HTML5, and CSS3, adhering to WCAG guidelines and modern usability principles.
- Built reusable, modular React components using functional programming techniques and hooks (e.g., useEffect, useContext), establishing a scalable and maintainable UI architecture.
- Designed and developed robust RESTful APIs using Java Spring Boot, leveraging asynchronous controllers, Spring Security, and layered architecture to support enterprise-grade applications.
- Optimized build and deployment workflows using Vite and Webpack, ensuring environment-specific configurations, production asset bundling, and performance tuning.
- Collaborated closely with backend teams to integrate Spring Boot services, manage Redis caching layers, and automate CI/CD pipelines using GitHub Actions and Jenkins.
- Wrote and optimized SQL queries and JPA/Hibernate-based data access logic for reporting and analytics, implementing indexing, query tuning, and relational schema design.
- Implemented telemetry and Google Analytics tracking to monitor application usage and performance trends, driving data-informed UX decisions and feature enhancements.
- Achieved a 35% improvement in frontend performance by applying lazy loading, code splitting, image optimization, tree shaking, and other Web Vitals best practices to boost SEO and page speed.

Tech Stack:

React.js, TypeScript, Java, Spring Boot, REST API, MySQL, JPA, Hibernate, Redis, Webpack, Vite, GitHub Actions, Jenkins, Jest, React Testing Library, HTML5, CSS3, Google Analytics, SEO, WCAG, Telemetry

EDUCATION

Universidad Católica de Pereira 04.2005 – 09.2012

Bachelor of Computer Science

SKILLS

Languages:	C++, JS(ES6), TS, Python, C#, Rust, PHP, Java, HTML5
Frameworks and Libraries:	React.js, Next.js, Gatesby, Angular, JPA, Java Spring Boot, Hibernate, Node.js, Express, React Native, Redux, RxJS, REST API, GraphQL, Ably, Laravel, Tailwind CSS, RabbitMQ, Kafka, Shopify, WordPress
DBMS	MySQL, MS SQL, PostgreSQL, MongoDB, AWS DynamoDB, AWS RDS, Azure SQL Database
IDEs and Tools:	Visual Studio Code, Jenkins, Cypress, Jest, Jasmine, Terraform, Docker, Kubernetes, Redux DevTools, Babel, Webpack, Storybook, Azure DevOps, Git Bash, PowerShell
Cloud Services:	AWS Cloud Services, Microsoft Azure, GCP
Other skills:	Problem Solving, Full Stack Development, Critical Thinking, Leadership, Algorithm Design, Team-Oriented, SOLID, Agile (Scrum), Microservices, Test-Driven Development (TDD), Diagnosing, Business Analysts
